Organisation Overview

Virgin Active is one of the leading health and fitness organisations in South Africa, offering modern gym facilities, group exercise classes, personal training, wellness programmes, and digital fitness services. The company aims to inspire people to live active and healthy lifestyles by providing high-quality fitness experiences. Virgin Active serves a wide range of customers, including students, working professionals, families, and senior citizens. The organisation is committed to improving the health and well-being of its members through innovation and excellent customer service (Virgin Active, 2025a).

Website Goals and Objectives

The main goal of the proposed website is to improve the digital experience for current and potential members. The website aims to increase online membership registrations, simplify class bookings, provide fitness information, and improve customer support. Key Performance Indicators (KPIs) will include increased website traffic, more online membership sign-ups, higher class booking rates, improved customer satisfaction, and lower website bounce rates (Virgin Active, 2025b).

Current Website Analysis

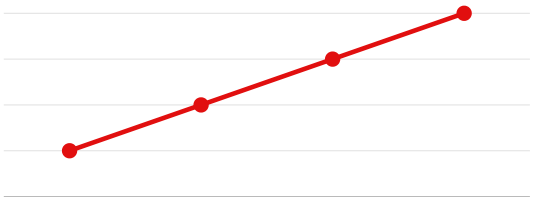

Virgin Active's current website allows users to explore membership options, locate clubs, book classes, and access fitness resources. Although the website is informative, some users may find it difficult to locate certain services quickly. The proposed redesign will improve navigation, enhance the search function, and make important information easier to access. The website will also be fully responsive to ensure a smooth experience across desktops, tablets, and smartphones (Virgin Active, 2025b).

Proposed Website Features and Functionality

The redesigned website will include a modern homepage, online membership registration, secure member login, class booking system, club locator, personal training information, membership pricing, fitness blog, contact page, FAQ section, and live chat support. Members will also be able to manage their accounts and receive personalised fitness recommendations.

Design and User Experience

The website will use Virgin Active's red, white, and black brand colours to create a modern and professional appearance. Clear typography, simple navigation menus, and a responsive design will improve usability across all devices. Low-fidelity wireframes will be created before development to organise the website's content and improve the overall user experience.

Technique Requirements

The website will be developed using HTML, CSS, JavaScript, and Bootstrap. It will use secure cloud hosting, SSL certificates, a registered domain name, and regular software updates to ensure the safety of user data and reliable website performance.

Timeline and Budget

The project is expected to take 8 weeks, including planning, design, development, testing, and deployment. The estimated budget is R85,000, covering website development, hosting, domain registration, testing, security, and maintenance.
